REMINDER: Fertiliser Regulations

From 1st October 2023, Ammonium Nitrate & Calcium Ammonium Nitrate fertiliser grades with a nitrogen content of 16 units or above became regulated chemicals.

It is now a **legal requirement** that all customers who wish to purchase fertiliser provide a copy of a photograph of personal identification e.g driving licence or passport. Photographic identification is required from everyone in the business who would place a fertiliser order.

Tarff is also required to establish the 'role' of the professional user or business and requires every customer to provide the CPH number for each holding under their control where fertiliser will be applied. The VAT registration number is also required for every business (if applicable).

WHAT DO YOU NEED TO PROVIDE?

Photographic ID

- We require a picture of either your passport/driving licence.

CPH Number

- For each holding (if more than one)

VAT Number (if applicable)

HOW CAN I PROVIDE MY INFORMATION?

WhatsApp

- Send ID image(s) and details via WhatsApp to our fertiliser department on 07958 206183. Use your account code as a reference.

Email

- Send an email to fertiliser.enquiries@tarffvalley.co.uk. If there are multiple ID images to send, please attach all images in one email. Use your account code as the reference.

It is imperative that customers send their details in advance of purchasing fertiliser. **Without the correct documentation in place, we are unable to process fertiliser orders.**

Speak to your local Tarff Valley Sales Representative about this special offer. ***Offer ends Thursday 29th February 2024.**

MONEY OFF VOUCHERS IN STORE!

Head into your local Tarff Valley store and pick up your FREE copy of the Horslyx Balancers BACK TO BASICS guide, which includes money off vouchers!

At this time of the year, horses will likely spend more time in their stable. Horslyx Respiratory Balancer is designed to provide a two-pronged approach to supporting a healthy respiratory system.

Ingredients such as menthol, eucalyptus, and aniseed support the airways. Meanwhile, the high-specification balancer package helps to maintain immunity.

All Horslyx Balancers need to be licked, which takes time and patience and can help reduce stress and boredom. Licking also enhances saliva production, which helps support the digestive system. For more information on Horslyx Balancers, visit www.horslyx.com

Country UF Cattle Boluses

United Farmers has created and manufactured three different boluses for cattle: a standard cattle bolus, a high iodine version and a calcium bolus. Get ready for calving and turnout now!

Find out more about each of the individual products below.

Standard Cattle Bolus

- Provides up to 240 days supplementation of 6 essential trace elements and 3 vitamins.
- Twin resin coated to support consistent supply of nutrients.
- Contains high levels of copper, selenium, cobalt, zinc and Vitamin E to support muscle development and growth.
- 20 x 107g per pack.

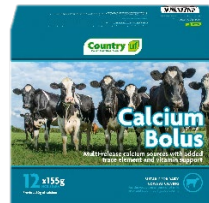

High Iodine Cattle Bolus

- Providing up to 180 days supplementation of 6 essential trace elements and 3 vitamins.
- Twin resin coated to support consistent supply of nutrients.
- Contains high levels of iodine, copper, selenium, cobalt and Vitamin E to optimise fertility and reduce retained cleansings.
- 20 x 107g per pack.

Calcium Bolus

- Provides four sources of calcium (slow, medium, rapid and protected) for optimal response.
- Supports the reduction of the risk of milk fever and subclinical hypocalcemia.
- Includes selenium to support a healthy immune system and reduce retained cleansings.
- 12 x 155g pack.

Speak to a member of staff in your local Tarff Valley branch about the Country UF bolus range.

SPECIAL OFFER!

£2 off TopSpec UlsaKind Cubes and Equerry Conditioning Mash throughout February & March. Available in Dumfries, Castle Kennedy and Newtown St Boswells. Offer only available on promotional stock.

Sheep Compound Feed

By now, many farmers will have scanned their sheep and have an idea of what's to come at lambing time. Scanning is a great tool for farmers to help understand the nutritional requirements of their sheep.

Depending on whether it's singles, twins, triplets or more(!), every farmer needs to consider the requirements of their flock and feed in proportion to their needs.

Tarff has a number of compound feeds for sheep to choose from. The range includes feeds up to 19% protein. These compounds have been specifically designed to incorporate only the best raw materials and are made up with the correct energy, protein and required vitamin and mineral levels to ensure optimization of milk yield, sheep health and lamb growth.

Compound Feed for Sheep

- ✓ 15% - 19% protein range
- ✓ High DUP from soya for better milk production and to improve colostrum
- ✓ Includes Megalac for high energy to increase milk yields in ewes
- ✓ Mineral package for in-lamb ewes

Speak to your local Tarff Valley Sales Representative or call 01557 820247 for details on Tarff's own brand compound sheep feeds.

Short Training Courses

At Tarff Services we are committed to ensuring our members and customers are kept up to date with training requirements.

We recognise the importance and need for maintaining training certificates, not only for members and customers to remain compliant with regulatory bodies, but to ensure skills, knowledge and safety are reinforced.

Whether you are looking for training for yourself or your workforce, Tarff Services is able to arrange a number of short training courses, either on farm or at a location near to you. Call Tracey McEwan, Services Coordinator, on 07785 657861 to discuss your training requirements.
